### 2mm Pitch, Multi Functional Connector System (Floating [Board-to-Board], Swing-Lock [Wire-to-Board], Short-Circuit Pin)

**DF59** Series

#### ■Features ●Common to all series

### 1. High Operating Temperature

DF59's are rated at temperatures up to 105 ℃. ●DF59

### 2. Swing Lock Structure (Wire-to-Board)

The DF59 features a "swing-lock" mechanism that employs both a positive and friction lock. This helps to prevent accidental unmating by severe wiring and mechanical stress.

### 3. Short-Circuit Pin

The Short-Circuit Pin allows the termination of an open circuit. Typically used at the end of a series of connected circuit boards.

#### 4. Multi Function Design

The DF59 has the ability to function as either a Board-to-Wire or Board-to-Board System. The PCB mounted receptacle is designed to mate with the W-to-B, B-to-B, and Short Circuit Pin connectors. This multi function ability allows versatility while keeping connectors to a minimum.

### 5. Contact Design

The terminal design features two-point contact to ensure a highly reliable connection.

### 6. Common Applicator

Crimping can be performed using the applicator (AP105-DF11-22S) for the existing series DF11-22S C F(A), by replacing the die with the one for DF59 series.

\* For crimping quality standards and crimping conditions, crimping needs to be performed in accordance with the specific conditions of DF59-22PCFA.

### Common to DF59/59S/59SN

### 7. Floating Structure (Board-to-Board)

The Board-to-Board connector can be used to connect two PCB together in a co-planar arrangement and features a "Stress free contact" that floats  $\pm$  0.5mm in the X, Y and Z dimensions.

### 8. Space Savings

The DF59 series offers high performance in a compact, space saving design; featuring a 2mm pitch and coupled with a mated height of only 2.48mm with AWG#22 cable. The single position floating plugs DF59S and DF59SN are specifically designed to save space, and can be mounted in high density applications.

#### 9. Robust locking structure on DF59M (W-to-B Connection) The lock mechanism on compact DF59M provides 16N horizontal lock strength. (Fig.4)

### 10. Standardization of PCB layout

The DF59S/SN type is used on board-to-board connections, and the DF59M type is intended for wire-to-board connections. Although they have different receptacles, the PCB mounting pattern can be used for these two types. Different combinations of these connectors can be used in the same system with a common PCB. This allows for standardization of PCB. (Fig.5)

#### Note : Each stencil mask is necessary

In cases where the application will demand a high level of reliability, such as automotive, please contact a company representative for further information.

### Product Specifications

		DF59/S/SN		3A

	DF59-*P-2C	30mΩ n	30mΩ min.		30 times
7.Resistance to soldering heat	No melting of	resin which a	affect the p	performance.	Reflow : Depends on recommended temperature profile. Hand soldering : Soldering iron temperature $350 \pm 10^\circ$ C, 3 sec.

Note 1 : Including temperature rise caused by current flow.

Note 2 : The term "storage" refers to products stored for long period of time prior to mounting and use.

Operating temperature and humidity range covers connectors after installation, storage, shipment or during transportation.

Note 3 : The rated voltage is the applied voltage when connectors are mounted parallel to each other on the PCB with a distance of 1.6mm or more between them. Hirose recommends his mounting distance.

This mounting distance is required in order to prevent creepage between the printed wiring to maintain an effective voltage of 300V, according to IEC 60664 and JIS C 60664 standards.

Extraction Tool	DF-C-PO(B)	550-0179-2	DF59-22PCFA DF59-22PCA	
(W-to-B)	DF-C-PO(A)	550-0170-8	DF59M Series	
Insertion Tool (B-to-B)	DF59SN-1P-FC/IN-TOOL	667-0040-2	DF59SN-1P-FC	

Note 1 : Customers are strongly encouraged to utilize HRS application tooling or tooling created by a Hirose tooling partner. Hirose assumes no liability for customers using tooling from non-recognized sources.

Note 2 : Please contact Japan Automatic Machine Co., Ltd. (hereinafter J.A.M.) through their website regarding crimping issues when using applicators manufactured by J.A.M. URL http://www.jam-net.co.jp

### Mating Dimensions

### Board-to-board connection (floating plug)

[Standard]

### [Single contact type]

### [Single contact slim type]

### •Short-circuit pin connection

### •Wire-to-Board connection [Standard]

#### [Single contact type]

# Operating Precautions

1. Recommended Temperature Profile (Lead-free soldering possible)	
	250
	220°C
	200
	50
	TIME (sec)
	<ul> <li>[Applicable Conditions]</li> <li>1. Peak Temperature : MAX 250°C</li> <li>2. Heated Area : 220°C or above, within 60 sec.</li> <li>3. Pre-heating Area : 150 to 180°C, 90 to 120 sec.</li> <li>4. Number of Times : within 2 times</li> <li>*Measured at contact lead area</li> <li>Please be noted that the reflow condition may vary depending on soldering paste type, manufacturer of soldering material, board size, as well as conditions of other mounting materials.</li> <li>(*1) Above temperature profile is our recommended value.</li> </ul>
2. Recommended Hand Solder Conditions	Soldering iron temperature : 350 $\pm$ 10 $^\circ C$ , soldering time : within 3 seconds
3. Recommended Screen Thickness, Open Ratio (Pattern Area Ratio)	Thickness 0.1mm, Open ratio : 100%
4. Warpage of PC board	Maximum of 0.02mm at the connector center, with both ends of the connector as reference points.
5. Cleaning Condition	Cleaning with IPA is possible. (Cleaning is not recommended. In case of cleaning, please evaluate if it causes a decrease in the performance which includes mechanical operation and environmental resistance.)
6. Precautions	<ul> <li>When inserting crimp-type (solderless) terminals to crimping (solderless) sockets, to maintain reliable performance, please do not insert obliquely.</li> <li>DO NOT mate/un-mate a non-terminated plug with a non-mounted receptacles. This may lead to damage or deformation of the contacts.</li> <li>Please note that pulling on the wires or cable during un-mating may cause damage.</li> <li>DO NOT apply flux to the contact terminals when hand soldering the receptacle to the board. Flux can wick into the electrical contact areas and may lead to connection failures.</li> <li>Slight discoloration on the insulating materials will not affect form, fit or function of the connectors.</li> <li>Please refer to the following for the points for proper handling regarding mating/unmating operations.</li> <li>"DF59 Insertion and Removal Manual" ETAD-H0496-00</li> <li>"DF59S Insertion manual" ETAD-H0779-00</li> </ul>
