

ISO71xxCC 4242-V_{PK} Small-Footprint Low-Power Triple and Quad Channels Digital Isolators

1 Features

- Maximum Signaling Rate: 50 Mbps (With 5-V Supplies)
- Robust Design With Integrated Noise Filter
- Default Output Low Option (Suffix F)
- Low Power Consumption, Typical I_{CC} per Channel (With 3.3-V Supplies):
 - ISO7131: 1.5 mA at 1 Mbps, 2.6 mA at 25 Mbps
 - ISO7140: 1 mA at 1 Mbps, 2.3 mA at 25 Mbps
 - ISO7141: 1.3 mA at 1 Mbps, 2.6 mA at 25 Mbps
- Low Propagation Delay: 23-ns Typical (3.3-V Supplies)
- Wide Temperature Range: –40°C to 125°C
- 50-kV/μs Transient Immunity, Typical
- Long Life With SiO₂ Isolation Barrier
- Operates from 2.7-V, 3.3-V, and 5-V Supply and Logic Levels
- Small QSOP-16 Package
- Safety and Regulatory Approvals
 - 2500-V_{RMS} Isolation for 1 minute per UL 1577
 - 4242-V_{PK} Isolation per DIN V VDE V 0884-10 (VDE V 0884-10):2006-12, 566 V_{PK} Working Voltage
 - CSA Component Acceptance Notice 5A, IEC 60950-1 and IEC 61010-1 End Equipment Standards
 - CQC Certification per GB 4943.1-2011

2 Applications

- General-Purpose Isolation
 - Industrial Fieldbus
 - Profibus
 - Modbus™
 - DeviceNet Data Buses
 - RS-232, RS-485
 - Serial Peripheral Interface

3 Description

ISO7131, ISO7140, and ISO7141 devices provide galvanic isolation up to 2500 V_{RMS} for 1 minute per UL and 4242 V_{PK} per VDE. ISO7131 has three channels with two forward and one reverse-direction channels. ISO7140 and ISO7141 are quad-channel isolators; ISO7140 has four forward channels, ISO7141 has three forward and one reverse-direction channels. These devices are capable of 50-Mbps maximum data rate with 5-V supplies and 40-Mbps maximum data rate with 3.3-V or 2.7-V supplies, with integrated filters on the inputs for noise-prone applications. The suffix F indicates that default output state is low; otherwise, the default output state is high (see Table 3).

Each isolation channel has a logic input and output buffer separated by a silicon dioxide (SiO₂) insulation barrier. Used with isolated power supplies, these devices prevent noise currents on a data bus or other circuits from entering the local ground and interfering with or damaging sensitive circuitry. The devices have TTL input thresholds and can operate from 2.7-V, 3.3-V, and 5-V supplies. All inputs are 5-V tolerant when supplied from a 2.7-V or 3.3-V supply.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
ISO7131CC	SSOP (16)	4.90 mm × 3.90 mm
ISO7140CC		
ISO7140FCC		
ISO7141CC		
ISO7141FCC		

(1) For all available packages, see the orderable addendum at the end of the datasheet.

Simplified Schematic

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (September 2013) to Revision F	Page
• Added <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section	1
• VDE Standard changed to DIN V VDE V 0884-10 (VDE V 0884-10):2006-12	1

Changes from Revision D (August 2013) to Revision E	Page
• Changed From: 2500 V_{RMS} Isolation for 1 minute per UL 1577 (Approval Pending) To: (Approved)	1
• Added note1 to the AVAILABLE OPTIONS table	17
• Changed Figure 15	18
• Changed From: Basic Insulation To: Basic Insulation, Altitude ≤ 5000m, Tropical Climate, 250 VRMS maximum working voltage in the Regulatory Information table	19
• Changed File number: E181974 (approval pending) To: File number: E181974 in the Regulatory Information table	19
• Changed the title of Figure 21 , Figure 22 , and Figure 23 to include "PRBS 2 ¹⁶ - 1"	23

Changes from Revision C (July 2013) to Revision D	Page
• Added Safety List item "GB 4943.1-2011 and GB 8898:2011 CQC Certification (Approval Pending)"	1
• Added Figure 2	12
• Deleted "Product Preview" From the AVAILABLE OPTIONS table	17
• Changed the REGULATORY INFORMATION, added column for CQC	19

Changes from Revision B (June 2013) to Revision C
Page

• Changed Feature From: ISO7140: TBD at 1 Mbps, TBD at 25 Mbps To: ISO7140: 1 mA at 1 Mbps, 2.3 mA at 25 Mbps..	1
• Added text to the Description: "All inputs are 5V tolerant when supplied from a 2.7V or 3.3V supply."	1
• Deleted the Product Status table.....	1
• Changed the SAFETY and REGULATORY APPROVALS	1
• Changed the ABSOLUTE MAXIMUM RATINGS table	5
• Changed the SWITCHING CHARACTERISTICS table, Input glitch rejection time.	7
• Changed the SWITCHING CHARACTERISTICS table, Input glitch rejection time.	8
• Changed the SWITCHING CHARACTERISTICS table, Input glitch rejection time.	8
• Changed ISO7140 in the SUPPLY CURRENT table From: TBD To: values.....	9
• Changed ISO7140 in the SUPPLY CURRENT table From: TBD To: values.....	10
• Changed ISO7140 in the SUPPLY CURRENT table From: TBD To: values.....	11
• Changed Figure 1 X-axis scale	12
• Changed the AVAILABLE OPTIONS table.....	17

Changes from Revision A (June 2013) to Revision B
Page

• Changed device ISO7141CC From: Product Preview To: Released in the Product Status table	1
---	---

Changes from Original (April 2013) to Revision A
Page

• Changed the Simplified Schematic, added ground symbols.....	1
• Changed the SWITCHING CHARACTERISTICS table, Input glitch rejection time. Values by device.	7
• Changed the SWITCHING CHARACTERISTICS table, Input glitch rejection time. Values by device.	8
• Changed the SWITCHING CHARACTERISTICS table, Input glitch rejection time. Values by device.	8
• Added Figure 3	12

5 Pin Configuration and Functions

**16-Pin
SSOP Package
Top View**

Pin Functions

PIN				I/O	DESCRIPTION
NAME	ISO7131	ISO7140	ISO7141		
EN	—	10	—	I	Output enable. All output pins are enabled when EN is high or disconnected and disabled when EN is low.
EN1	7	—	7	I	Output enable 1. Output pins on side-1 are enabled when EN1 is high or disconnected and disabled when EN1 is low.
EN2	10	—	10	I	Output enable 2. Output pins on side-2 are enabled when EN2 is high or disconnected and disabled when EN2 is low.
GND1	2,8	2,8	2,8	—	Ground connection for V_{CC1}
GND2	9,15	9,15	9,15	—	Ground connection for V_{CC2}
INA	3	3	3	I	Input, channel A
INB	4	4	4	I	Input, channel B
INC	12	5	5	I	Input, channel C
IND	—	6	11	I	Input, channel D
NC	6,11	7	—	—	No Connect pins are floating with no internal connection
OUTA	14	14	14	O	Output, channel A
OUTB	13	13	13	O	Output, channel B
OUTC	5	12	12	O	Output, channel C
OUTD	—	11	6	O	Output, channel D
V_{CC1}	1	1	1	—	Power supply, V_{CC1}
V_{CC2}	16	16	16	—	Power supply, V_{CC2}

6 Specifications

6.1 Absolute Maximum Ratings⁽¹⁾

		MIN	MAX	UNIT
V_{CC1} , V_{CC2}	Supply voltage ⁽²⁾	–0.5	6	V
IN_x , EN_x , OUT_x	Voltage	–0.5	$V_{CC} + 0.5$ ⁽³⁾	V
I_O	Output current	–15	15	mA
T_J	Maximum junction temperature		150	°C
T_{stg}	Storage temperature	–65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under [Recommended Operating Conditions](#) is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values except differential I/O bus voltages are with respect to the local ground terminal (GND1 or GND2) and are peak voltage values.
- (3) Maximum voltage must not exceed 6 V

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±4000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

		MIN	NOM	MAX	UNIT
V_{CC1} , V_{CC2}	Supply voltage	2.7		5.5	V
I_{OH}	High-level output current ($V_{CC} \geq 3.0$ V)	–4			mA
	High-level output current ($V_{CC} < 3.0$ V)	–2			
I_{OL}	Low-level output current			4	mA
V_{IH}	High-level input voltage	2		5.5	V
V_{IL}	Low-level input voltage	0		0.8	
t_{ui}	Input pulse duration ($V_{CC} \geq 4.5$ V)	20			ns
t_{ui}	Input pulse duration ($V_{CC} < 4.5$ V)	25			
$1 / t_{ui}$	Signaling rate ($V_{CC} \geq 4.5$ V)	0		50	Mbps
$1 / t_{ui}$	Signaling rate ($V_{CC} < 4.5$ V)	0		40	
T_A	Ambient temperature	–40	25	125	°C
T_J	Junction temperature	–40		136	

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		ISO7131, ISO714x	UNIT
		DBQ	
		16 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	104.5	°C/W
R _{θJC(top)}	Junction-to-case(top) thermal resistance	57.8	°C/W
R _{θJB}	Junction-to-board thermal resistance	46.8	°C/W
ψ _{JT}	Junction-to-top characterization parameter	18.3	°C/W
ψ _{JB}	Junction-to-board characterization parameter	46.4	°C/W

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

6.5 Power Dissipation Ratings

	TEST CONDITIONS	VALUE	UNIT
P _D	Device power dissipation V _{CC1} = V _{CC2} = 5.5 V, T _J = 150°C, C _L = 15 pF Input a 25-MHz, 50% duty cycle square wave	150	mW

6.6 Electrical Characteristics: V_{CC1} and V_{CC2} at 5 V ±10%

V_{CC1} and V_{CC2} at 5 V ± 10% (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V _{OH}	I _{OH} = –4 mA; see Figure 10	V _{CCO} ⁽¹⁾ – 0.5	4.8		V
	I _{OH} = –20 μA; see Figure 10	V _{CCO} ⁽¹⁾ – 0.1	5		
V _{OL}	I _{OL} = 4 mA; see Figure 10		0.2	0.4	V
	I _{OL} = 20 μA; see Figure 10		0	0.1	
V _{I(HYS)}	Input threshold voltage hysteresis		450		mV
I _{IH}	High-level input current	V _{IH} = V _{CC} at INx or ENx		10	μA
I _{IL}	Low-level input current	V _{IL} = 0 V at INx or ENx	–10		μA
CMTI	Common-mode transient immunity	V _I = V _{CC} or 0 V; see Figure 13	25	75	kV/μs

(1) V_{CCO} is the supply voltage, V_{CC1} or V_{CC2}, for the output channel that is being measured.

6.7 Electrical Characteristics: V_{CC1} and V_{CC2} at 3.3 V ±10%

V_{CC1} and V_{CC2} at 3.3 V ±10% (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V _{OH}	I _{OH} = –4 mA; see Figure 10	V _{CCO} ⁽¹⁾ – 0.5	3		V
	I _{OH} = –20 μA; see Figure 10	V _{CCO} ⁽¹⁾ – 0.1	3.3		
V _{OL}	I _{OL} = 4 mA; see Figure 10		0.2	0.4	V
	I _{OL} = 20 μA; see Figure 10		0	0.1	
V _{I(HYS)}	Input threshold voltage hysteresis		425		mV
I _{IH}	High-level input current	V _{IH} = V _{CC} at INx or ENx		10	μA
I _{IL}	Low-level input current	V _{IL} = 0 V at INx or ENx	–10		μA
CMTI	Common-mode transient immunity	V _I = V _{CC} or 0 V; see Figure 13	25	50	kV/μs

(1) V_{CCO} is the supply voltage, V_{CC1} or V_{CC2}, for the output channel that is being measured.

6.8 Electrical Characteristics: V_{CC1} and V_{CC2} at 2.7 V

V_{CC1} and V_{CC2} at 2.7 V (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OH} High-level output voltage	$I_{OH} = -2 \text{ mA}$; see Figure 10	$V_{CCO}^{(1)} - 0.3$	2.5		V
	$I_{OH} = -20 \text{ } \mu\text{A}$; see Figure 10	$V_{CCO}^{(1)} - 0.1$	2.7		
V_{OL} Low-level output voltage	$I_{OL} = 4 \text{ mA}$; see Figure 10		0.2	0.4	V
	$I_{OL} = 20 \text{ } \mu\text{A}$; see Figure 10		0	0.1	
$V_{I(HYS)}$ Input threshold voltage hysteresis			350		mV
I_{IH} High-level input current	$V_{IH} = V_{CC}$ at INx or ENx			10	μA
I_{IL} Low-level input current	$V_{IL} = 0 \text{ V}$ at INx or ENx	-10			μA
CMTI Common-mode transient immunity	$V_I = V_{CC}$ or 0 V; see Figure 13	25	50		kV/ μs

(1) V_{CCO} is the supply voltage, V_{CC1} or V_{CC2} , for the output channel that is being measured.

6.9 Switching Characteristics: V_{CC1} and V_{CC2} at 5 V $\pm 10\%$

V_{CC1} and V_{CC2} at 5 V $\pm 10\%$ (over recommended operating conditions unless otherwise noted.)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL} Propagation delay time	See Figure 10	12	19	35	ns
$PWD^{(1)}$ Pulse width distortion $ t_{PHL} - t_{PLH} $				3	
$t_{sk(o)}^{(2)}$ Channel-to-channel output skew time	Same-direction channels			2	ns
	Opposite-direction channels			4	
$t_{sk(pp)}^{(3)}$ Part-to-part skew time				12	ns
t_r Output signal rise time	See Figure 10		2		ns
t_f Output signal fall time			2		ns
t_{PHZ} , t_{PLZ} Disable propagation delay, high/low-to-high impedance output	See Figure 11		6	10	ns
t_{PZH} , t_{PZL} Enable propagation delay, high impedance-to-high/low output			5	10	ns
t_{fs} Fail-safe output delay time from input data or power loss	See Figure 12		9.5		μs
t_{GR} Input glitch rejection time			11		ns

(1) Also known as pulse skew

(2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals, and loads.

6.10 Switching Characteristics: V_{CC1} and V_{CC2} at 3.3 V $\pm 10\%$

V_{CC1} and V_{CC2} at 3.3 V $\pm 10\%$ (over recommended operating conditions unless otherwise noted.)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay time	See Figure 10	15	23	45	ns
PWD ⁽¹⁾	Pulse width distortion $ t_{PHL} - t_{PLH} $				3	
$t_{sk(o)}$ ⁽²⁾	Channel-to-channel output skew time	Same-direction Channels			2	ns
		Opposite-direction Channels			4	
$t_{sk(pp)}$ ⁽³⁾	Part-to-part skew time				19	ns
t_r	Output signal rise time	See Figure 10		2.5		ns
t_f	Output signal fall time			2.5		ns
t_{PHZ} , t_{PLZ}	Disable propagation delay, from high/low to high-impedance output	See Figure 11		6.5	15	ns
t_{PZH} , t_{PZL}	Enable propagation delay, from high-impedance to high/low output			6.5	15	ns
t_{fs}	Fail-safe output delay time from input data or power loss	See Figure 12		8		μ s
t_{GR}	Input glitch rejection time			12.5		ns

(1) Also known as pulse skew

(2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals and loads.

6.11 Switching Characteristics: V_{CC1} and V_{CC2} at 2.7 V

V_{CC1} and V_{CC2} at 2.7 V (over recommended operating conditions unless otherwise noted.)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PLH} , t_{PHL}	Propagation delay time	See Figure 10	15	27	50	ns
PWD ⁽¹⁾	Pulse width distortion $ t_{PHL} - t_{PLH} $				3	
$t_{sk(o)}$ ⁽²⁾	Channel-to-channel output skew time	Same-direction Channels			2	ns
		Opposite-direction Channels			4	
$t_{sk(pp)}$ ⁽³⁾	Part-to-part skew time				22	ns
t_r	Output signal rise time	See Figure 10		3		ns
t_f	Output signal fall time			3		ns
t_{PHZ} , t_{PLZ}	Disable propagation delay, from high/low to high-impedance output	See Figure 11		9	15	ns
t_{PZH} , t_{PZL}	Enable propagation delay, from high-impedance to high/low output			9	15	ns
t_{fs}	Fail-safe output delay time from input data or power loss	See Figure 12		8.5		μ s
t_{GR}	Input glitch rejection time			14		ns

(1) Also known as pulse skew

(2) $t_{sk(o)}$ is the skew between outputs of a single device with all driving inputs connected together and the outputs switching in the same direction while driving identical loads.

(3) $t_{sk(pp)}$ is the magnitude of the difference in propagation delay times between any terminals of different devices switching in the same direction while operating at identical supply voltages, temperature, input signals, and loads.

6.12 Supply Current: V_{CC1} and V_{CC2} at 5 V $\pm 10\%$

V_{CC1} and V_{CC2} at 5 V $\pm 10\%$ (over recommended operating conditions unless otherwise noted.)

8 Detailed Description

8.1 Overview

The isolator in [Figure 14](#) is based on a capacitive isolation barrier technique. The I/O channel of the device consists of two internal data channels, a high-frequency channel (HF) with a bandwidth from 100 kbps up to 150 Mbps, and a low-frequency channel (LF) covering the range from 100 kbps down to DC. In principle, a single-ended input signal entering the HF-channel is split into a differential signal through the inverter gate at the input. The following capacitor-resistor networks differentiate the signal into transients, which then are converted into differential pulses by two comparators. The comparator outputs drive a NOR-gate flip-flop whose output feeds an output multiplexer. A decision logic (DCL) at the driving output of the flip-flop measures the durations between signal transients. If the duration between two consecutive transients exceeds a certain time limit, (as in the case of a low-frequency signal), the DCL forces the output-multiplexer to switch from the high- to the low-frequency channel.

Because low-frequency input signals require the internal capacitors to assume prohibitively large values, these signals are pulse-width modulated (PWM) with the carrier frequency of an internal oscillator, thus creating a sufficiently high frequency signal, capable of passing the capacitive barrier. As the input is modulated, a low-pass filter (LPF) is needed to remove the high-frequency carrier from the actual data before passing it on to the output multiplexer.

		V _{IO} = 500 V, 100°C ≤ T _A ≤ T _A max		>10 ¹¹		
C _{IO} ⁽¹⁾	Barrier capacitance, input to output	V _I = 0.4 sin (2πft), f = 1 MHz		2.3		pF
C _I ⁽²⁾	Input capacitance	V _I = V _{CC} /2 + 0.4 sin (2πft), f = 1 MHz, V _{CC} = 5 V		2.8		pF

(1) All pins on each side of the barrier tied together creating a two-terminal device.

(2) Measured from input pin to ground.

NOTE

Creepage and clearance requirements should be applied according to the specific equipment isolation standards of an application. Care should be taken to maintain the creepage and clearance distance of a board design to ensure that the mounting pads of the isolator on the printed-circuit-board (PCB) do not reduce this distance.

Creepage and clearance on a PCB become equal in certain cases. Techniques such as inserting grooves and/or ribs on a PCB are used to help increase these specifications.

Table 2. IEC 60664-1 Ratings Table

PARAMETER	TEST CONDITIONS	SPECIFICATION
Basic Isolation Group	Material Group	II
Installation classification	Rated mains voltage $\leq 150\text{ V}_{\text{RMS}}$	I–IV
	Rated mains voltage $\leq 300\text{ V}_{\text{RMS}}$	I–III
	Rated mains voltage $\leq 400\text{ V}_{\text{RMS}}$	I–II

8.3.1.1 Safety Limiting Values

Safety limiting intends to prevent potential damage to the isolation barrier upon failure of input or output circuitry. A failure of the IO can allow low resistance to ground or the supply and, without current limiting, dissipate sufficient power to overheat the die and damage the isolation barrier, potentially leading to secondary system failures.

PARAMETER	TEST CONDITIONS			MIN	TYP	MAX	UNIT
I_S Safety input, output, or supply current	DBQ-16	$R_{\theta JA} = 104.5^\circ\text{C/W}$, $V_I = 5.5\text{V}$, $T_J = 150^\circ\text{C}$, $T_A = 25^\circ\text{C}$				217	mA
		$R_{\theta JA} = 104.5^\circ\text{C/W}$, $V_I = 3.6\text{V}$, $T_J = 150^\circ\text{C}$, $T_A = 25^\circ\text{C}$				332	
		$R_{\theta JA} = 104.5^\circ\text{C/W}$, $V_I = 2.7\text{V}$, $T_J = 150^\circ\text{C}$, $T_A = 25^\circ\text{C}$				443	
T_S Maximum case temperature						150	$^\circ\text{C}$

The safety-limiting constraint is the absolute-maximum junction temperature specified in the [Absolute Maximum Ratings](#)⁽¹⁾ table. The power dissipation and junction-to-air thermal impedance of the device installed in the application hardware determines the junction temperature. The assumed junction-to-air thermal resistance in the [Thermal Information](#) table is that of a device installed on a high-K test board for leaded surface-mount packages. The power is the recommended maximum input voltage times the current. The junction temperature is then the ambient temperature plus the power times the junction-to-air thermal resistance.

Figure 15. DBQ-16 θ_{JC} Thermal Derating Curve

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under [Recommended Operating Conditions](#) is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

ISO71xx use single-ended TTL-logic switching technology. Its supply voltage range is from 3 V to 5.5 V for both supplies, V_{CC1} and V_{CC2} . When designing with digital isolators, it is important to note that due to the single-ended design structure, digital isolators do not conform to any specific interface standard and are only intended for isolating single-ended CMOS or TTL digital signal lines. The isolator is typically placed between the data controller (that is, μC or UART), and a data converter or a line transceiver, regardless of the interface type or standard.

9.2 Typical Applications

9.2.1 Isolated Data Acquisition System for Process Control

ISO71xx combined with TI's precision analog-to-digital converter and mixed signal micro-controller can create an advanced isolated data acquisition system as shown in Figure 17.

Figure 17. Isolated Data Acquisition System for Process Control

Typical Applications (continued)

9.2.1.1 Design Requirements

Unlike optocouplers, which need external components to improve performance, provide bias, or limit current, ISO71xx only needs two external bypass capacitors to operate.

9.2.1.2 Detailed Design Procedure

Figure 18. Typical ISO7131 Circuit Hook-up

Figure 19. Typical ISO7140 Circuit Hook-up

Figure 20. Typical ISO7141 Circuit Hook-up

Typical Applications (continued)

9.2.1.3 Application Curves

Typical eye diagrams of ISO71xx (see [Figure 21](#), [Figure 22](#), and [Figure 23](#)) indicate low jitter and wide open eye at the maximum data rate.

Figure 21. Typical Eye Diagram at 40 MBPS, PRBS $2^{16} - 1$, 2.7-V Operation

9.2.2.3 Application Curves

See previous [Application Curves](#).

10 Power Supply Recommendations

To ensure reliable operation at all data rates and supply voltages, a 0.1- μ F bypass capacitor is recommended at input and output supply pins (V_{CC1} and V_{CC2}). The capacitors should be placed as close to the supply pins as possible. If only a single primary-side power supply is available in an application, isolated power can be generated for the secondary-side with the help of a transformer driver such as TI's [SN6501](#). For such applications, detailed power supply design and transformer selection recommendations are available in [SN6501](#) data sheet ([SLLSEA0](#)).

11 Layout

11.1 Layout Guidelines

A minimum of four layers is required to accomplish a low EMI PCB design (see [Figure 25](#)). Layer stacking should be in the following order (top-to-bottom): high-speed signal layer, ground plane, power plane and low-frequency signal layer.

- Routing the high-speed traces on the top layer avoids the use of vias (and the introduction of their inductances) and allows for clean interconnects between the isolator and the transmitter and receiver circuits of the data link.
- Placing a solid ground plane next to the high-speed signal layer establishes controlled impedance for transmission line interconnects and provides an excellent low-inductance path for the return current flow.
- Placing the power plane next to the ground plane creates additional high-frequency bypass capacitance of approximately 100pF/in².
- Routing the slower speed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.

If an additional supply voltage plane or signal layer is needed, add a second power / ground plane system to the stack to keep it symmetrical. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high-frequency bypass capacitance significantly.

For detailed layout recommendations, see Application Note [SLLA284](#), *Digital Isolator Design Guide*.

11.1.1 PCB Material

For digital circuit boards operating below 150 Mbps, (or rise and fall times higher than 1 ns), and trace lengths of up to 10 inches, use standard FR-4 epoxy-glass as PCB material. FR-4 (Flame Retardant 4) meets the requirements of Underwriters Laboratories UL94-V0, and is preferred over cheaper alternatives due to its lower dielectric losses at high frequencies, less moisture absorption, greater strength and stiffness, and its self-extinguishing flammability-characteristics.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

- ⁽³⁾ MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
- ⁽⁴⁾ There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.
- ⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
- ⁽⁶⁾ Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

4214846/A 03/2014

NOTES:

- Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 inch, per side.
- This dimension does not include interlead flash.
- Reference JEDEC registration MO-137, variation AB.

EXAMPLE BOARD LAYOUT

DBQ0016A

SSOP - 1.75 mm max height

SHRINK SMALL-OUTLINE PACKAGE

LAND PATTERN EXAMPLE
SCALE:8X

SOLDER MASK DETAILS

4214846/A 03/2014

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.

7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DBQ0016A

SSOP - 1.75 mm max height

SHRINK SMALL-OUTLINE PACKAGE

SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.127 MM] THICK STENCIL
SCALE:8X

4214846/A 03/2014

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
