# 90

MORE THAN

# YEARS OF HISTORY IS JUST THE BEGINNING

Everything started back in the 30's in the Basque Country sited in a small village in the Northern part of Spain. We used to manufacture cart axles and mill balls for cement factories. Decade after decade, we forged our innovative heritage by launching tools such as side nut adjustable wrench, so imitated over the recent years.

Today, we keep our commitment to continuous improvement adapting to the needs of professionals who appreciate their toolbox.

A close-up photograph of a wooden frame being assembled on a workbench. The frame is made of light-colored wood and is held together by several blue clamps. The background is a light-colored, textured surface, possibly a workbench or a piece of paper with faint markings. A yellow brushstroke graphic is overlaid across the middle of the image, containing the text '05. CLAMPING TOOLS'.

## ACCESSORIES FOR BENCH VICES

## ALUMINIUM JAWS

- Prism jaws of hardened aluminium
- Offer efficient clamping and protection of the workpiece at the same time
- Designed for horizontal clamping of flat and round objects
- Designed for vertical clamping of round objects
- 90° recess in the top to hold flat bar stock while marking out or centrepunching
- Horizontal vee-groove with an angle of 120° for clamping of pipes and other round workpieces
- 3 vertical vee-grooves with angles of 100°, 120° and 130° for clamping of pipes and other round workpieces
- Excellent powerful neodymium magnetic strip

POLYURETHANE JAWS

- Polyurethane jaws with grooves
- For clamping of round parts with very delicate details
- The jaws are manufactured from the special flexible polyurethane material
- Shore hardness A82
- Polyurethane is known for its unique abilities to “bite onto” the work piece without damaging or scratching it
- Polyurethane is so flexible, that it returns to its original shape after deformation
- Excellent powerful neodymium magnetic strip

## T-HANDLE SCREWDRIVERS

### T-HANDLE WITH HEXAGONAL TIP

- Blade is made of high quality steel. Black finish
- The long blade allows to apply a controlled torque and provides an easy access to screws requiring depth
- The short 90° blade is used for extreme torque or to work in areas where height is limited
- Size and part number are laser branded on the blade for easy identification
- Rotating cap in the handle that allows a fast finger movement during turning reducing tightening time

T-HANDLE WITH TORX® TIP

- Blade is made of high quality steel. Black finish
- The long blade allows to apply a controlled torque and provides an easy access to screws requiring depth
- The short 90° blade is used for extreme torque or to work in areas where height is limited
- Size and part number are laser branded on the blade for easy identification
- Rotating cap in the handle that allows a fast finger movement during turning reducing tightening time

**FILTER REGULATOR**

- When compressing atmospheric air, which always has a humidity rate, liquid water is generated in the pneumatic circuits. It is necessary to filter this water to protect the circuit and the air operated tools
- Use an air filter and regulator for the spray guns
- Technical data:
  - Air connection 1/2"
  - Bowl capacity 100 ml
  - Gauge diameter 50 mm
  - Pressure regulation range 0.5-10 bar
  - Minimum temperature +5°
  - Maximum temperature 60°
  - Nominal flow 3.200 NL/mn
  - Filtering size 20 m

## STANDARDS

### What is a standard?

A standard is a document that provides requirements, specifications, guidelines or characteristics that can be used consistently to ensure that materials, products, processes and services are fit for their purpose.

### What are the benefits of ISO International Standards?

ISO International Standards ensure that products and services are safe, reliable and of good quality. For business, they are strategic tools that reduce costs by minimizing waste and errors, and increasing productivity. They help companies to access new markets, level the playing field for developing countries and facilitate free and fair global trade.

### IRIMO main product families

#### Socket wrenches

- ISO 2725, hand sockets, general dimensions; ISO 1174, driving squares. The standards define the limits to certain dimensions to avoid the play between the socket and the bolt, the accessibility to reach, and guarantee the correct torque transmission and to work with nuts and studs.
- ISO 1711, hand and impact sockets, define the minimum hardness that a socket should have, and the minimum torque that a socket should resist. This assures that only the right material has been used, and the socket will be able to be used without breakage risk.
- The profile of the sockets, hex and biex, was designed for a much better distribution of the strength far from the corners to avoid possible breakings.  
At the same time the transmission of the torque to the bolts and nuts is made out of the edges, protecting the life of the components.

#### Adjustable Wrenches

- Stands ISO 6787 standard torque values plus 30% without opening and deformation.
- General dimensions of adjustable wrenches according to ISO 6787 standard.
- Design forged in one piece.

#### Spanners-Wrenches

- Stands ISO 1711-1 standard torque values plus 30% without opening and deformation.
- Higher hardness according to ISO 1711-1, without fragility risk.
- Wrench end fitting tolerance according to ISO 691 gives higher performance and better transmission of the torque to the bolts and nuts.

## Pliers

- ISO standards on pliers define, for each product family, the basic dimensions of the product. In addition to this, when applicable ISO standards also define:
  - Maximum acceptable deformations after a load test.
  - Maximum acceptable deformations after a torsion test.
  - Maximum acceptable cutting force tests.
  - The most important ISO standards for pliers are:
    - ISO 5745 Pliers for gripping and manipulating – Dimensions and test values.
    - ISO 5746 Engineer's and "Lineman's" pliers – Dimensions and test values.
    - ISO 5749 Diagonal cutting nippers – Dimensions and test values.
    - ISO 8976 Multiple slip joint pliers – Dimensions and test values.
    - ISO 9242 Construction worker's pincers – Dimensions and test values.
    - ISO 9243 Pliers and nippers – Carpenter's pincers – Dimensions and test values.

## Torque wrenches

ISO 6789 classifies the torque wrenches into different types (I, II) and classes (A, B, C, D, E, F).

The ISO standard assigns different accuracy levels (4% or 6%) depending on the type, class and max torque of each wrench.

This accuracy needs to be accomplished between 20% and 100% of the maximum torque of the wrench.

The standard also establishes the calibration procedure, conditions and frequency as well as other tests and product requirements.

IRIMO torque tools comply with ISO 6789 standard and SNA Europe offers calibration services in his internal After Sales Centers.

## Screwdrivers

ISO standards on screwdrivers define the tip dimension, the minimum hardness and the minimum torque that they should resist.

After torque testing with the minimum value, screwdrivers shall not show any deformation or injuries at the tip:

- ISO 2380 Slotted screwdrivers – Dimensions, hardness and minimum torque values.
- ISO 8764 Phillips and Pozidriv screwdrivers – Dimensions, hardness and minimum torque values.
- ISO 2936 Hexagon screwdrivers – Dimensions, hardness and minimum torque values.

However, the IRIMO screwdrivers must meet Internal Standards that are above the ISO standard.

Internal torque values standards is 20% over the ISO standard for Slotted screwdrivers and 50% in Phillips and Pozidriv screwdrivers.

The combination of the raw material and hardness determines the performance of the blade, longer life and quality work Internal hardness; Minimum SNA Europe 58-59 HRc. Minimum ISO standards 54 HRc. TORX® drivers; torque values are evaluated with testing gauges of Acument Global Technologies Inc., licensor of TORX®.

SNA Europe is committed to providing its customers with products that are fully compliant with all regulations, international protocols and customer standards to which they are subject. In this respect, SNA Europe complies with appropriate international regulations and directives, including REACH, RoSH, WEEE, C€ Conflict Minerals, etc.

Regarding REACH European regulation N° 1907/2006, it requires suppliers of any product to inform the customer of the presence of substances of very high concern (SVHC) (<http://www.echa.europa.eu/candidate-list-table>) listed in the relevant and official list above a concentration of 0.1% weight by weight (w/w). The ECHA, European Chemicals Agency, recently added several chemical substances to the list and as of December, 2014 there are 161 substances in the Candidate List of SVHC. The compliance in REACH prevents the user from probable serious effects to human health (and/or) the environment, including carcinogenic, toxic and mutagenic categories.

The definition and aim of the RoHS directive is quite simple. The RoHS directive aims to restrict certain dangerous substances commonly used in electronic and electronic equipment. Any RoHS compliant component is tested for the presence of Lead (Pb), Cadmium (Cd), Mercury (Hg), Hexavalent chromium (Hex-Cr), Polybrominated biphenyls (PBB), and Polybrominated diphenyl ethers (PBDE).

The Waste Electrical and Electronic Equipment Directive (WEEE Directive) is the European Community directive 2012/19/EU on waste electrical and electronic equipment (WEEE) which, together with the RoHS Directive 2002/95/EC, became European Law in February 2003. The WEEE Directive set collection, recycling and recovery targets for all types of electrical goods, with a minimum rate of 4 kilograms per head of population per annum recovered for recycling by 2009.

The C€ marking is the manufacturer's declaration that the product meets the requirements of the applicable EU directives.

The term Conflict Minerals refers to raw materials that come from a particular part of the world where conflict is occurring and affects the mining and trading of those materials. These are defined as columbite-tantalite, also known as coltan (from which tantalum is derived); cassiterite (tin); gold; wolframite (tungsten); or their derivatives; to be financing conflict in the Democratic Republic of the Congo or an adjoining country.
